

Analysis of Human Interpretability in Document Classification

P.K. Suriyaa Kumari

MS17903820

A THESIS
SUBMITTED TO
SRI LANKA INSTITUTE OF INFORMATION TECHNOLOGY
IN PARTIAL FULLFILMENT OF THE REQUIREMENTS
FOR THE DEGREE OF
MASTER OF SCIENCE IN INFORMATION TECHNOLOGY

December 2018

I certify that I have read this thesis and that in my opinion it is fully adequate, in scope and in quality, as a thesis for the degree of Master of Science.

2019/01/22

Mr. Prasanna S. Haddela

Approved for MSc. Research Project:

2019/1/22

MSc. Research Project Coordinator, SLIIT

Approved for MSc:

2019/1/22

MSc. Programme Coordinator, SLIIT

Declaration of originality

This is to certify that the work is entirely my own and not of any other person, unless explicitly acknowledged (including citation of published and unpublished sources). The work has not previously been submitted in any form to the Sri Lanka Institute of Information Technology or to any other institution for assessment for any other purpose.

Acknowledgement

I would like to express my sincere gratitude to everyone who supported and guided me throughout this year to complete my research project. Without their help and guidance, I would not have been able to gain a successful research experience.

First, I would like to thank my supervisor Mr. Prasanna S. Haddela, for the guidance, he provided from very beginning to the end of my research. Despite his busy work schedule, he was always supportive and guided me on the correct path. His feedback, comments and insight provided a tremendous support during the research work.

I would also thank Mr. Samantha Rajapaksha, the M.Sc. Research coordinator for providing guidance and support and Prof. Samantha Thelijaoda for providing required knowledge about research concepts. Furthermore, I would like to thank all other lectures and staff members of the Department of Computing for the support they have given me in numerous ways.

I am grateful to my family for their support and love in many ways. Specially, I would like to convey my heartiest gratitude to my husband staying beside me and encouraging me to carry out this work, my parents who always supported me and provided me with a good education.

Finally, I would like to thank all my colleagues who assisted me throughout this study and it was a wonderful experience to be with them.

List of Figures	ix
List of Tables.....	xi
List of Equations	xii
Chapter 1	1
1. Introduction.....	1
1.1 Study Background.....	1
1.2 Problem Definition	3
1.3 Significance of Study	4
1.4 Scope and Limitations	5
1.5 Research Questions	5
1.6 Research Aim and Objectives	6
Research Main Objectives.....	7
1.7 Dissertation Structure	8
Chapter 2	9
Literature Review	9
2.1 Introduction.....	9
2.1.1 Interpreting Predictions of a Classifier	9
2.1.2 Text Mining and Classification	10
2.1.2 Application Areas of Text Mining and Classification.....	11
2.2 Literature Relevant to Text Classification.....	11
2.2.1 Research's on Sinhala Language Document Classification	14
2.3 Data Pre-Processing	15
2.3.1 What is a feature vector?	16
2.3.1 Uses of Feature Vector.....	16
2.3.2 Feature identification Methods	17
Term Frequency (tf).....	17
Inverse document frequency	17
Term frequency–Inverse document frequency	18
2.4 Text Classifiers	19

2.4.1 Naïve Bayes Classifier.....	19
2.4.2 Support Vector Machine.....	20
Advantages of SVM	20
2.4.3 K-nearest neighbor Classifier	20
Advantages of kNN	21
2.4.4 Radom Forest Classifier	21
Advantages of Random Forest Classification Algorithm.....	22
2.5 Text Classification Tools	22
2.5.1 R Studio.....	22
2.5.2 Weka (Waikato Environment for Knowledge Analysis).....	23
2.5.3 Anaconda Jupyter Note Book	23
2.6 Performance Evaluation Matrices.....	24
2.6.1 Accuracy, Precision, Recall and F1-Measure.....	24
Accuracy.....	24
Precision, Recall and F1 Measure	24
Chapter 3	26
Application of Machine Learning Classifiers in Text Classification	26
3.1 Introduction.....	26
3.1.1 Data Used for Research Work.....	27
3.1.2 Software Tools.....	27
3.2 Experimental Method used for Text Classification	28
3.2.1 Data Preprocessing	29
3.2.2 Application of Classification Algorithms	33
Split Data into Training and Test Data Sets	35
Split Data into Training and Test Data Sets using WEKA Tool.....	36
Application of Machine Learning Classifiers	37
Working with Support Vector Machine Classification Algorithm	39
Working with Naïve Bayes Classification Algorithm	43
Working with k-nearset neighbour (kNN) Classification Algorithm.....	47
Application of kNN in WEKA Tool.....	48
Working with Random Forest Classification Algorithm	51
Application of Random Forest classifier in WEKA Tool.....	52
3.4 Evaluating Human Interpretability of Machine Learning Classifiers	57

3.4.1 Application of Prediction Interpretability libraries in Classification Models	58
3.4.2 Application of Lime library in text classification model with python	60
Application of lime library into Random Forest Classifier	63
Application of lime into DecisionTree Classifier	66
Application of Lime into kNN Classifier	68
Application of Lime into Support Vector Classifier	69
Chapter 4	71
Results and Evaluation	71
4.1 Introduction	71
4.2 Experimental Result Analysis	72
Choosing Best Classifier for Text Classification	72
Discuss about Evaluating Human Interpretability of Text Classifiers	74
Evaluating Machine Learning Predictions with Random Forest Classifier ...	75
Evaluating Machine Learning Predictions with SVM and kNN Classifier	77
Chapter 5	80
Research Discussion	80
5.1 Introduction	80
5.2 Limitations	80
5.3 Conclusion	81
5.4 Future Works	82

Abstract

Analysis of Human Interpretability in Document Classification

P.K.Suriyaa Kumari
MSc. in Information Technology
Supervisor: Mr. Prasanna S. Haddela
December 2018

With high use of computers, the collection of textual data generated, exchanged, stored and accessed increased in massive amount and became one of the richest sources of data for the organization. As a result, people are tending to use natural language processing application to categorize this large volume of data efficient and accurate manner. Their application of machine learning models. When it comes to Natural Language processing (NLP) applications where most of them follows supervised learning techniques, automatic document classification models developed to do content-based assignment where the materials are assigned into predefined categories. This makes it easier to find the relevant information at the right time and for filtering and routing documents directly to correct users.

Mostly these learning models are operating in black-box manner where there is no way to interpret how the model has decided which class an instance should assigned. understanding the reason behind how learning makes these predictions are very important to trust such learning models in real application. This thesis presents the work related to the experimental work been carried with set of text classifiers to interpret text classifiers predictions, so any classifier can be evaluated based on how well they support classification purpose.
