Table of Contents	2
List of Figures	5
List of Abbreviations	6
Abstract.....	7
Chapter 1	8
Introduction.....	8
Contents.....	8
1.1. Chapter Overview	9
1.2 Problem Domain	9
1.3 Resource Requirements	10
1.3.1 Hardware requirements.....	10
1.3.2 Software Requirement.....	11
1.4 Project Document Structure	11
Chapter 2 - Research question.....	11
Chapter 3 - Research Objectives	11
Chapter 4 - Literature review.....	11
Chapter 5 - Methodology.....	11
Chapter 6 - Timeline.....	12
1.5 Chapter Summary	12
Chapter 2	13
Research Question	13
Contents	13
2.1 Chapter Overview	14
2.2 Project Aim.....	14
2.3 Research Questions	14
2.4 Chapter Summary	14
Chapter 3	15
Literature Review.....	15
Contents	15
3.1 Chapter Overview	16
3.2 Literature Review.....	16
3.2.1 Empirical literature	18

3.2.1.1 Multi-Tenancy Generic ideology	18
3.2.1.2 Cloud computing aspect of Multi-Tenancy.....	19
3.2.1.3 The Policy of ENISA	21
3.2.2 Theoretical literature	24
3.2.2.1 Cloud Deployment Models	24
3.2.2.2 Types of Service models.....	26
3.2.2.3 OpenStack Architecture	28
3.2.2.4 Multi tenancy Tree.....	28
Chapter 4	37
Research Objectives	37
Contents	37
4.1 Chapter Overview	38
4.2 Research Main Objectives.....	38
4.3 Sub Objectives.....	38
Chapter 5	39
Research Methodology	39
Contents	39
5.1 Chapter Overview	40
5.2 Overview of the methodology	40
5.2.1 Different problems and attacks on the Cloud.....	40
5.2.1.1 SQL injection attacks	41
5.2.1.2 The Path Traversal attack.....	41
5.2.2 Cloud Simulators	41
5.2.2.1 Zed Attack Proxy (ZAP).....	42
5.2.2.2 Process of Simulation.....	42
5.2.2.3 Research outcome	44
Chapter 6	46
Timeline	46
Contents	46
6.1 Chapter Overview	47
6.2 Working Plan	47
6.3 Time Schedule	47
Chapter 7	48
Discussion and Conclusion	48

Appendix 1	49
References.....	53

CA – Cloud Providers

Abstract

Cloud Computing is one of the major concepts of the computing model, in the Industry of Information technology. It has enabled many optimized services on-demand computing. There are many benefits for cloud services consumers. Multi-Tenancy cloud environment, which is a part of them and on the other hand, biggest challenges are security and privacy concerns. This proposal covers some of the security issues and the challenges of Multi-Tenancy. In Cloud computing, the risk that refers to where the resource sharing and it entails in terms of privacy and reliability could be despoiled and this could consider as a security issue. Specially, The SaaS model, which is a promising technology and it, grows each year in high demand. However, at the security level, there are many hindrances, and becomes a major problematic against its adoption. Therefore, there must be effective security solutions and strategies need to be proposed to have a good understanding of attack vectors and attack exteriors. This paper discussed several types of attacks, also how to prevent those, and finally, the recommendations for a multi-tenancy environment.

Keywords: Cloud Computing, Multi-tenancy, Attacks, Simulation, Data security, Data privacy, etc.
